KISAN SAATHI — PRADHAN MANTRI FASAL BIMA YOJANA (PMFBY)

OFFICIAL CROP LOSS & ADVERSITY TELEMETRY DOSSIER (वधिकि क्षतसिाक्ष्य प्रतविदन)

Dossier Ref: PMFBY-EVD-7C6BB272	Issued: 31-Oct-2026 17:53 UTC	Status: FILED (72h Window)

1. FARMER, LAND PARCEL & PERIL PARTICULARS (कृषक एवं खेत वविरण)

Farmer Identifier: FRM-TEST-001	Crop Insured: Mustard (सरसों)
Farm Parcel Name: East Field	Cultivated Area: 1.75 Acres
Peril / Calamity Type: Hailstorm (ओलावृष्टि)	Observation Window: 2026-10-01 to 2026-10-04

STATUTORY PMFBY CLAUSE 15.2 COMPLIANCE: Loss event intimated within 72 hours of occurrence. As per Operational Guidelines, a Joint Assessment Team comprising the Revenue Patwari, State Agriculture Officer, and Insurance Surveyor must conduct spot-verification within 10 days of intimation.

2. COPERNICUS SENTINEL-2 SATELLITE CROP-STRESS TELEMETRY

Parameter	Observed	Baseline Norm	Deviation / Anomaly	Damage Interpretation
NDVI (Canopy Vigor)	0.350	0.650 - 0.750	-38.5%	Severe vegetative collapse / canopy lodging
NDMI (Moisture Saturation)	0.490	0.100 - 0.250	+142%	Acute inundation & excessive standing water
LST (Surface Temp)	21.4 °C	27.5 - 31.0 °C	-6.8 °C Deficit	Prolonged overcast & thermal deficit
Root-zone Soil Moisture	89.5%	35 - 55%	Saturated	Anoxic root-zone / asphyxiation risk
Agronomic Stress Index	85/100	< 30 / 100	+54 pts CRITICAL	High probability of yield loss (> 50%)

3. OPEN-METEO CLIMATOLOGICAL ANOMALY MATRIX (मौसम वसिंगतरिपिोर्ट)

Meteorological Peril	Claim Window Reading	Historical Normal	Deviation	Peril Classification
Cumulative Precipitation	138.4 mm	14.5 mm (10-yr norm)	+854% Spike	Unseasonal Cloudburst / Torrential Rain
Peak Wind Gust Speed	44.5 km/h	< 18.0 km/h	+145% Strong	Severe squall causing physical lodging
Max Daytime Temperature	23.4 °C	29.0 °C	-5.6 °C Anomaly	Sustained daylight deprivation

4. FARMER DAMAGE NARRATIVE & DECLARATION (कसिान का क्षतबियान)

Insured Farmer Statement: "Severe hailstorm battered the standing pods."

Preliminary Technical Assessment: Multispectral Sentinel-2 imagery corroborates extensive waterlogging with a sharp 48.5% drop in canopy reflectance following recorded torrential rainfall. Root anoxia and stem lodging indicate severe unpreventable crop loss.

5. IN-SITU PHOTOGRAPHIC EVIDENCE (मौके के फोटोग्राफ साक्ष्य)

PHOTO RECORD #1: FIELD INUNDATION Status: Uploaded & GPS Geo-Tagged Coordinates: Centroid Verified Visual: Water level > 30 cm above root collar	PHOTO RECORD #2: CROP LODGING Status: Uploaded & GPS Geo-Tagged Coordinates: South Parcel Verified Visual: Stems flattened > 70% parcel area

6. JOINT SURVEY PROTOCOL & CLAIMS PROCEDURE (सर्वेक्षण नरि्देश)

1. Verification: Verify Khasra/Khatauni land records against the registered polygon.
2. On-Account Relief: Under PMFBY Clause 15.3 (Mid-Season Adversity), if estimated damage exceeds 50%, an on-account payment of up to 25% of the likely claim shall be disbursed directly to the farmer's Aadhaar-linked bank account without waiting for harvest.
3. Survey Deadline: Physical assessment must be completed within 10 working days.

7. STATUTORY ADVISORY DISCLAIMER (सांवधिकि अस्वीकरण)

DISCLAIMER (अस्वीकरण): Satellite and weather telemetry outputs are supplementary advisory evidence, not statutory proof of loss. This report is compiled under PMFBY guidelines and does not replace physical loss assessment by the notified State Insurance Committee.

Insured Farmer Signature (हस्ताक्षर बीमति कसिान)	Revenue Patwari / Lekhpal (पटवारी / लेखपाल मुहर)	Insurance Surveyor Sign (सर्वेयर पंजीकरण संख्या)
